

Muiracatiara

Durability class Class 1.

Specific gravity Fresh 1200-1250 kg/m3. At 12% moisture conten 750-900 kg/m3.

Colour Red with black stripes. This type of wood is therefore called Tigerwood.

Muiracatiara hardwood is widely used because of its decorative appearance and typical hardwood

properties (durable and strong). You will often see this hardwood in horizontal railings, facades, bridge **Applications**

decks and sheet piling. When planed, it becomes very slippery and has a greasy feeling.

Strength class D40

Details

Brandklasse gevel D, en B mogelijk met Forestlines®

Hardness 7700-9600 N.

Grain Straight to cross-thread, sometimes slightly wavy.

Timber texture Fine to moderately coarse.

Stability Low to medium

Natural drying in the open air can be done without any problems. Accelerated drying of Tigerwood can **Drying**

lead to surface cracks.

The Muiracatiara FSC wood is easy to work with, despite the high density. Gluing is reasonable easy and we have good experiences with finishing. Pre-drilling is recommended. The wood dries fairly quickly, but Workability

this process must be done carefully to avoid surface cracks in thin wood and longitudinal cracks in

thicker wood.

The colour of the heartwood is light orange-brown, with a variable proportion of dark brown 'veins'. This makes Muiracatiara wood particularly decorative. After exposure to sunlight, the wood quickly turns to

an orange-reddish brown to deep red brown. The sapwood is easily distinguishable as it has a straight

wire with few irregularities. The grain is fine.

Screwing/nailing Good. Pre-drilling is necessary.

Good with lacquer and varnish. After sanding, finishing and/or lacquering, it can show its beautiful Finishing of surface

pattern.

Botanical name Astronium spec. div.

Origin area Muiracatiara hardwood grows in Tropical Central America and South America.

Other names Gonçalo alves, Kingwood, Tigerwood.

Muiracatiara is mentioned in the NEN 5493 'Quality requirements for hardwood in earth, road and **Quality requirements**

hydraulic engineering works and other constructive applications.

FSC® certified Muiracatiara hardwood is available in the Amazon region of Brazil. The trees have a **Remarks**

diameter till about 0,6 -1,0 m, with a straight and cylindrical shape and a trunk of about 14-18 m. The

sapwood is about 4-10 cm wide

Family Anacardiceae

Forestlines® Muiracatiara hardwood is available in the Forestlines® profile
