

Piquia

Durability class Class 1-2. Strength class D35.

Piquia is often used as construction timber, both indoors and outdoors. In addition, the wood is used in Applications

anti-parking posts, decking, posts, garden furniture, (parquet) floors, planking for sluice gates and bridge

Specific gravity Fresh 900-1000 kg/m3. At 12% moisture content 750-850 kg/m3.

Colour Yellowish blond to light gray-brown with a similar sap.

Piquia is durable but has the colour of coniferous wood. Freshly sawn piquia has a mild vinegary smell, **Details**

but once dry it has no smell or taste.

Grain Usually cross-thread.

Timber texture The grain of Piquia wood is moderately coarse to coarse.

Drying Piquia hardwood dries slowly with a tendency to deform. Superficial cracks can also appear during drying.

7700 N. **Hardness**

Machining goes well with Paquia, but hard metal tools are recommended (interlocked grain). Pre-drilling is Workability

recommended. With gluing and finishing are less experiences. Piquia dries slowly with a tendency to

checking and deformation.

Screwing/nailing Pre-drilling is necessary for Piguia hardwood.

Finishing of surface Moderate to good. Please note that hairline cracks may occur while finishing.

Botanical name Carryocar Villosum

Origin area Piquia wood naturally grows in Costa Rica, Northern Colombia, the Amazon region and Guyana.

Other names Almendro, Ajillo, piquiarana.

FSC® certified Piguia is available in the Amazon region of Brazil. The large trees have a diameter up to **Remarks**

1,5-2 m and reach up to 45 m. The trunks have a length till 21 m. It is also possible to produce larger

dimensions in sawnwood.

Family Caryocaraceae

Projects Terrace Broeckgouw, Mijnsheerlyckheid, Bridgedeck Venco Campus.
